

# The Future of Fixing

The future needs a new relationship with making. A forward-thinking, backward-looking, sideways-stepping kind of making. A making born of the imaginative use of skills. Something like fixing.

The Future of Fixing is an open source exhibition and programme that promotes engagement with making and repair. It is a call for integrating fixing in our day to day life and for reflecting on attitudes to fixing in the future.

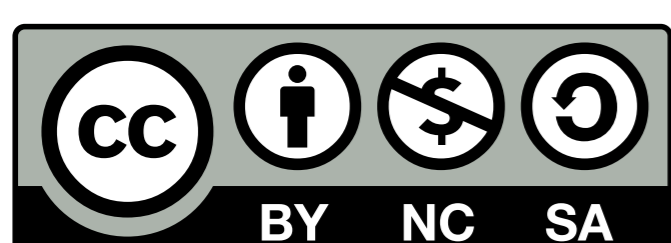

Created and developed by From Now On, it was first presented as Brave Fixed World at the Łódź Design Festival 2014, where it was shown as part of the British Council's Maker Library Network.

Now, released as Future of Fixing 1.0, the content of the exhibition is made freely available through a creative commons license for anyone to adapt, co-create and share their own version.

The version you are about to visit here, is based on and adapted from original concept and components. The online resource will hopefully include future versions created by you and other creatives, with new projects, books and activities that further explore the theme.
